

Press Release

Calvià, 20th March 2020

**CALVIÀ 2000 CLEANS ALL THE BINS AND CONTAINERS OF THE MUNICIPALITY  
AND CARRIES OUT CLEANING AND DISINFECTION OF THE MOST BUSY PUBLIC  
AREAS**

**The public company has reorganised its services maintaining waste collection and  
the collection of household pruning on demand**

The public company Calvià 2000 has reorganised its services these days in which the presence of people on the streets is practically non-existent.

Throughout this week, cleaning tasks are carried out on all the containers and rubbish bins in the municipality, with the use of a disinfectant product, and three teams have been assigned to carry out cleaning and disinfection (scrubbing and washing) of the busiest areas such as supermarkets, medical centres, pharmacies, etc. Next week, nine more teams will be added that usually work on a road cleaning route in hotel areas.

Due to the current situation, the Deixalleria remains closed and the junk collection service has been suspended, while the on-demand pruning collection service continues to operate (since operators can access private gardens to remove it).

Likewise, from the municipal company OhLimpia, and since centres are closed to the public, they carry out a thorough cleaning and disinfection in all the establishments where they work.

The Water Cycle service has also been reorganised to maintain the quality of the purified water at all times.

Both Calvià 2000 and OhLimpia have established protection and safety protocols for personnel, with necessary PPE (Individual Protection Equipment), following the recommendations of ANEPMA (National Association of Public Environmental Companies), which are adapting to situations that are emerging.
